SWISPY — Website Requirements

Development brief — divided into 2 main parts

PART 1 — Main Website & Online Ordering

1. Home Page

Brand introduction, hero section, best sellers, featured boxes, offers, CTA to order, social links.

2. Menu

Products divided by categories, product photos, descriptions, prices, availability, add to cart.

3. Product Page

Product details, quantity, options/add-ons when applicable, notes, add to cart.

4. Boxes

FLIRT (6), SECRET (12), SIGNATURE (20). Support fixed boxes and custom box selection if enabled.

5. Cart & Checkout

Cart summary, customer information, delivery/pickup, date/time, order notes, promo code, final price.

6. Online Payment

Online payment integration with secure checkout and successful/failed payment handling.

7. Delivery & Pickup

Delivery areas, delivery fee, minimum order, estimated time, pickup option and pickup details.

8. Order Confirmation

Order number, order summary, payment status, delivery/pickup details and confirmation message.

9. Customer Account

Optional login/register, order history, saved addresses and reorder.

10. Admin Dashboard

Manage products, prices, availability, categories, boxes, orders, customers, promo codes, delivery areas and basic sales data.

11. Integrations

WhatsApp, Instagram, TikTok, Google Maps, Google Business, Meta Pixel, Google Analytics and Search Console.

12. Technical Basics

Mobile-first responsive design, fast loading, SEO-ready structure, secure checkout, clean CMS/admin structure and easy content updates.

PART 2 — Gifts, Events & Special Orders

1. Send a Gift

Dedicated page for gift orders. Customer selects product/box, enters recipient name, sender name, recipient phone, delivery address, delivery date/time and gift message.

2. Gift Card

Customer can add a message/card to the order. Support optional card design and sender-name visibility.

3. Gift Packaging

Optional gift packaging/add-on with its own price if applicable.

4. Event Orders

Dedicated Event & Catering page for birthdays, weddings, engagements, corporate events, universities and other occasions.

5. Event Request Form

Event type, date, time, location, guest count, required quantity, preferred products/boxes, notes and optional reference/file upload.

6. Event Quote Flow

Customer submits request → admin reviews → quote/price is confirmed → customer receives confirmation/payment request → online payment.

7. Custom Box

Customer can build a box by selecting size and products, with automatic price calculation where applicable, plus message and delivery details.

8. Special Order Management

Admin dashboard should manage gift/event/custom orders separately from normal orders, with statuses such as New, Reviewing, Confirmed, Payment Pending, Paid, Preparing, Out for Delivery and Completed.

CORE CUSTOMER FLOWS

- Normal Order: Instagram/TikTok → Website → Menu → Product → Cart → Checkout → Online Payment → Confirmation.
- Gift: Website → Send a Gift → Product/Box → Recipient Details → Gift Message → Delivery → Online Payment → Confirmation.
- Event: Website → Event Order → Event Details → Products/Quantity → Request Quote → Confirmation → Payment.
- Custom Box: Website → Custom Box → Select Size → Select Products → Message → Delivery/Pickup → Payment.

DEVELOPMENT STRUCTURE

Please build the project in a modular structure so normal orders, gifts, events and custom boxes can be managed independently while sharing the same customer, product, payment and delivery systems.

The priority is not to overcomplicate the first version. The system must be clean, scalable, mobile-first and easy for the admin/team to update without changing code.
